Kingsley Okoli

TEST AUTOMATION | INFRASTRUCTURE & RELIABILITY

Manhattan, NY | kingsleyiokoli@gmail.com
linkedin.com/in/kingsley-okoli

Quality engineering leader who builds test infrastructure and AI agent systems for reliable software delivery. Built and operate an entire company's QA infrastructure as its sole QA engineer, with ownership of test strategy, production investigation, and release decisions.

EXPERIENCE

Sellfire

Aug 2025 - Present

QA Lead Oct 2026 - Present

Previously QA Engineer Aug 2025 - Oct 2026

- Built and operate company-wide QA infrastructure as the sole QA engineer, combining browser and API automation, parallel CI execution, and ownership of release approval.
- Architected an AI testing harness that expanded testing capacity and made agent-driven validation repeatable, with independent checks on the reliability of results.
- Uncovered cross-tenant authorization failures and built regression coverage for customer data isolation and administrator-only access.
- Traced approximately 2,300 silently dropped customer updates to a deployment sequencing failure. Documented the root cause and required ordering.

Rapptr Labs

Director of QA, AI Quality Engineering Oct 2026 - Present | Part-time contract

- Lead development of an AI-assisted QA offering spanning test automation, regression testing, and evaluation of AI-powered features.
- Define testing standards and delivery practices across client projects, and help shape service scope, pricing, and technical proposals.

Earlier employment:

Software Development Engineer in Test Aug 2024 - Aug 2025

- Built a client's first automated testing framework and CI integration. The work led to a direct hire by the client.
- Established regression testing as a required production release gate and used SQL to validate application data and business workflows.

QA Tester Nov 2021 - Aug 2024

- Created test plans and regression cases, reproduced defects, and verified fixes. Used SQL to validate application data and workflow states connected to Salesforce.

INDEPENDENT PROJECT

HallPass

hallpass.me

- Independently built and operate a live web application and a published Android app, owning development across the interface, backend, and data pipelines.
- Engineered automated data discovery and AI verification with safeguards for source accuracy, duplicate records, and personal information.

TECHNICAL SKILLS

Testing: Playwright, TypeScript, browser and API automation, REST/GraphQL, CI, regression strategy
Engineering: JavaScript, Node.js, Python, SQL, PostgreSQL, Next.js, Flutter
Systems: AI agent harnesses, test infrastructure, production diagnostics, authorization testing

EDUCATION

B.S. Computer Science | Fairleigh Dickinson University 2020
